

Enlitic Curie™

A Real-World Evidence Platform

Stop allowing a lack of capacity and repetitive activities get in the way of improving your technology. Let your AI produce a ROI.

The Enlitic Curie™ Platform Vision

Unlocking your clinical data and gaining insights into the information while increasing capacity, lowering costs, and improving efficiencies is our vision for the Enlitic Curie platform. But to be successful organizations need to take a logical, phased approach to get there.

Enlitic Curie™ is...

- An extensible AI platform that allows easy implementation, deployment and orchestration of Enlitic application modules and 3rd party AI algorithms.
- The industry's first localized real-world database and real-world evidence platform that unlocks the value of historical diagnostic images, aligned with real-time information linking data across any critical healthcare solution.
- Featuring a host of AI-powered applications that enable data standardization, deidentification and anonymization, research, risk mitigation, and workflow simplification – creating more time and improving patient outcomes.

Every Curie application shares a common inference pipeline, every Enlitic application deployed within Curie learns, adjusts, and gets smarter over time.

Reach Your Goals with Enlitic Curie and the AI Adoption Model

| Phase | Description |
|------------------------|---|
| Phase 0: Initiating | Providers have no strategy, no expertise and are just beginning to think about AI in their facility |
| Phase 1: Exploring | Providers have some technologies in place but no standards, may be discussing Ai with vendors but no strategy |
| Phase 2: Experimenting | A department may be running a POC, trialing software but no production roll out and no real adoption |
| Phase 3: Formalizing | Facilities begin to build a formalized plan, develop organizational skill sets and departmental plans and budgets |
| Phase 4: Expanding | AI is an enterprise objective and real benefits are being realized by the implementation of AI |

Let us show you what's possible.

Learn how you can execute a successful AI strategy with the deployment of the Enlitic Curie platform.

Simplicity

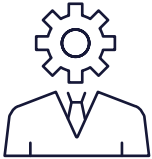

Simplify the implementation of AI algorithms and easily add new applications by eliminating multiple points of integration each time a new application is deployed. The platform is integrated with all modalities, the PACS, and the EMR. Additionally, integration with Curie|ENDEX™ ensures data is normalized to a standardized nomenclature meaning the relevant series are routed to the appropriate algorithm and results are labelled with clinically relevant descriptions.

Cost Savings

Lower costs of deployment and ongoing administration through centralized management of the AI environment via Curie. Reduce implementation time and the need for manual intervention of routing studies as the platform manages the orchestration of data.

Management

Integrations are managed from a central point rather than for each individual application or algorithm. You get better insights and reporting capabilities using centralized data and support is more easily accomplished with a single platform.

Data Integrity

Data integrity is a crucial factor in any AI deployment, ensuring the right data is analyzed and minimizing failed analysis or routing. Your data is normalized, managed with clinically relevant descriptions, and routed accordingly.

Trackability

Data can be tracked through the platform, to the predetermined application and back to the relevant information system from a single pane of glass.

Visibility

Having an enterprise view of application behavior and system performance ensures data flows as expected and troubleshooting is easily performed from a single, centralized perspective. You can monitor performance of each application and the overall system and control access to information, routing of data and workflow orchestration from within the platform.

Future Readiness

AI continues to grow; new applications are developed and the ability to be prepared for future growth is often an overlooked or lower priority factor.

Don't accept "Business as Usual."
