YOU NEED

AT SPEEDS
YOU WON'T EXPECT

LAITEK Advanced Migration

Your data, how you need it, as **fast** as possible.

While industry standards restrict most migration services to surface level access to your data – exposing your vital annotations to potential loss – LAITEK's signature methods dive deep, accessing your image data at its source.

Connectors for 60+ systems — if you've got it, we handle it.

"LAITEK alleviated the biggest fear in putting in a new PACS – the uncertainty you'll have all the priors the physicians need.

You really couldn't ask for more."

*– Judy Gronlund-Jacob
Manager PACS & Teleradiology, University Radiology*

Ideal for Large Projects

Millions of images and countless terabytes of data to move? **No big deal.**

We **specialize** in resolving large, difficult migrations that other services can't.

Low Clinical Impact

Most standard DICOM migrations place **massive strain** on clinical operation.

LAITEK's streamlined approach allows us to migrate even during **peak hours**.

Up to 5x Faster

Standard DICOM migration is **slow** – roughly 0.5tb of data per day.

Our migrations can move at speeds over 2.5tb/day, saving **time** and **money**.

No Data Left Behind

Vital annotations are stored at a level **too deep** for most services to reach.

LAITEK accesses your data at its source, ensuring that **nothing** is left behind.
