

**Are you manually
having to catch
billing issues?**

 ENLITIC

Billion Dollar Problem

- Many organizations don't know how many studies are sent for reimbursement that are undercoded
- Poor billing practices cause doctors in the US to lose an estimated **\$125 billion** each year. (Equifax)

Ask Yourself...

Are you correcting them?

- If not, how much revenue have you lost this year?

How many resources is it costing you to correct billing errors in radiology studies?

What other downstream effects do these mistakes have?

Data Standardization

- The use of CV and NLP within our advanced technology scans the image and metadata to ensure study and series labels are normalized and detailed.
- Labels account for contrast, laterality, and have complete and accurate descriptions.

The billing code for this study does not include contrast administered.
